LandScope America

A Tool for Strategic Conservation Planning

LandScape America

LandScape America

Strategic conservation planning requires data and collaboration in order to identify opportunities and cooperate in order to achieve goals.

LandScape America provides specific, targeted data relating to conservation priorities.

LandScape America also provides a publicly accessible planning and conservation tracking system that furthers cooperative conservation.

What is LandScope America?

What is LandScope America?

What is LandScope America?

- A free, easy-to-use online tool for conservation planning and collaboration.
- A tool for:
 - Finding and mapping shared priorities.
 - Sharing conservation success stories, pictures, and videos.
 - Track and report progress toward land protection goals.

How does LandScope America work?

LandScope America uses an interactive map viewer to bring together maps, data, photos, and stories and provides useful tools and resources for strategic conservation planning and priority-setting.

In addition to the map, LandScope America presents:

- Multimedia Content

The screenshot shows the LandScope America web application. At the top, there's a navigation menu with options like 'INTRODUCTION', 'EXPLORE PLACES & TOPICS', 'FOCUS & PLAN', 'TAKE ACTION', 'CONNECT & SHARE', and 'GO TO THE MAP'. Below this is a search bar and a 'Theme' dropdown set to 'Conservation Priorities'. The main area is a map of the United States with various colored overlays (purple, green, yellow) and numbered markers (1-12, 20, 28, 39, 59). A sidebar on the right shows multimedia content: 'Video 62', 'Photograph 100', and 'Article 100'. The footer includes the LandScope America logo, NatureServe logo, and National Geographic logo.

What is LandScape America?

What is LandScape America?

- Track and report progress toward land protection goals.

How does LandScape America work?

LandScape America uses an interactive map viewer to bring together maps, data, photos, and stories and provides useful tools and resources for strategic conservation planning and priority-setting.

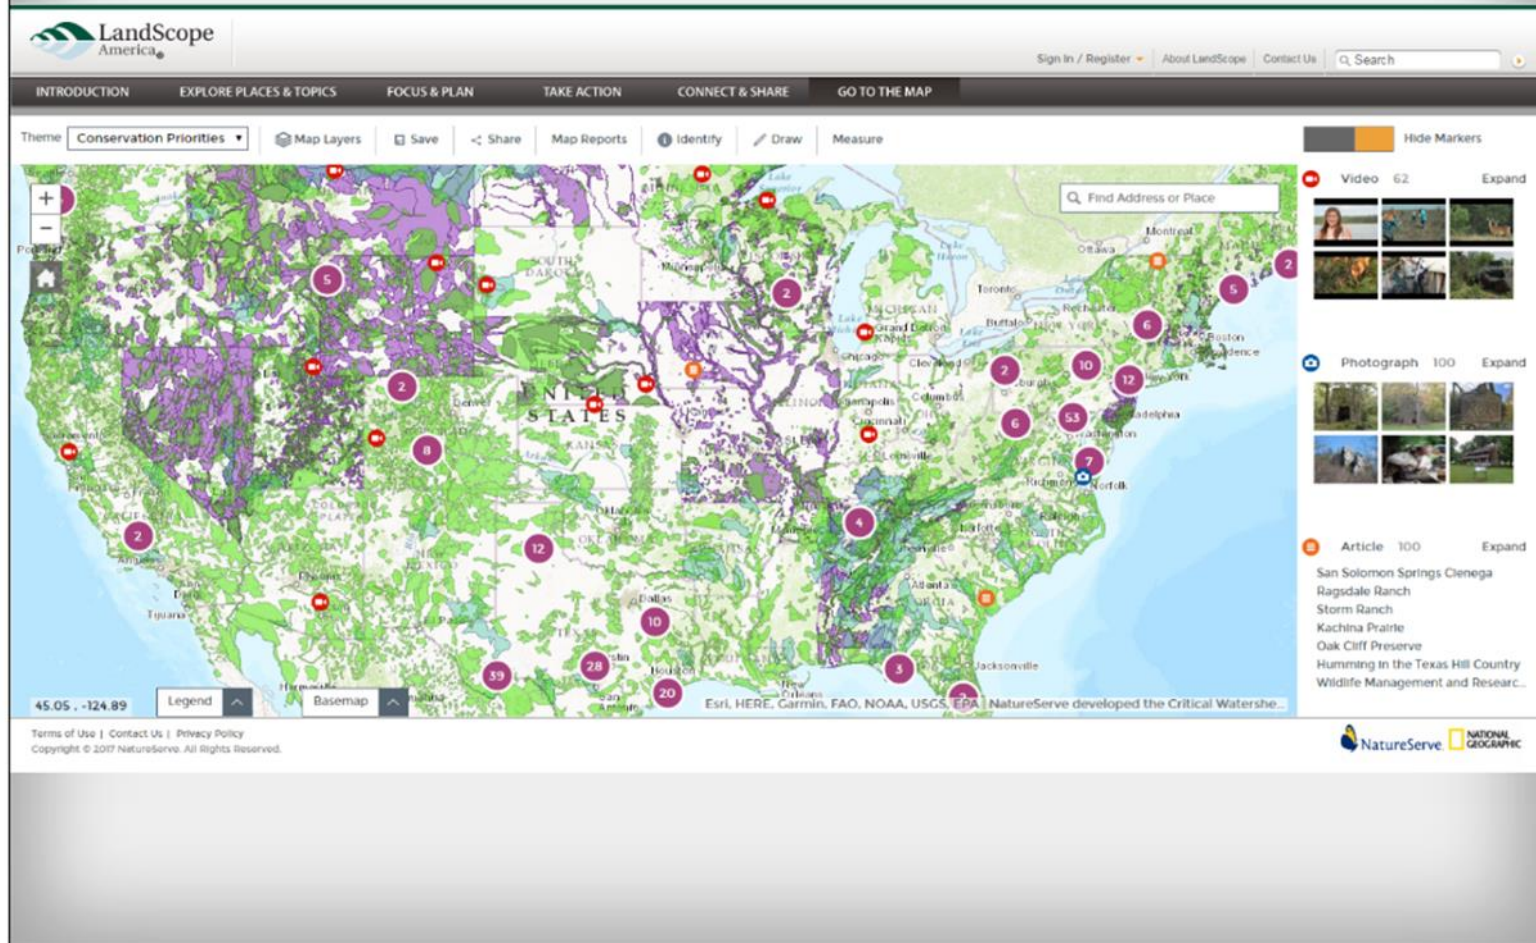

In addition to the map, LandScape America presents:

- Multimedia Content
- Editorial Content
- State and Organization Portals
- Conservation Priority Information

Finding and Mapping Priorities

Within LandScape, layers can be added and managed in several ways, including the following:

- Using the "Map Layers" Function
- Filtering by Theme
- Filtering by Title

The screenshot displays the LandScape America web application. At the top, the logo and navigation menu are visible, including options like 'INTRODUCTION', 'EXPLORE PLACES & TOPICS', 'FOCUS & PLAN', 'TAKE ACTION', 'CONNECT & SHARE', and 'GO TO THE MAP'. A search bar and user options (Sign In / Register, About LandScape, Contact Us) are also present.

The main content area features a map of the United States with various conservation priority areas highlighted in purple and green. The map is titled 'Conservation Priorities' and includes interactive tools such as 'Map Layers', 'Save', 'Share', 'Map Reports', 'Identify', 'Draw', and 'Measure'. A search bar for 'Find Address or Place' is located in the top right corner of the map area.

On the right side of the map, there are three multimedia content panels: 'Video 62', 'Photograph 100', and 'Article 100'. Each panel has an 'Expand' button and a grid of thumbnail images. The 'Article' panel lists several items, including 'San Solomon Springs Clemens Ragsdale Ranch Storm Ranch Kachina Prairie Oak Cliff Preserve Humming in the Texas Hill Country Wildlife Management and Resear...'. The 'NatureServe' and 'NATIONAL GEOGRAPHIC' logos are visible at the bottom right of the page.

Sharing Conservation Stories

In addition to the core layer management feature, LandScope provides the ability to easily share stories and multimedia related to conservation planning:

The screenshot shows the LandScope Chesapeake interface. At the top, there is a navigation bar with a 'BACK' button. Below it is a toolbar with options: 'Map Layers' (highlighted with a green circle), 'Save', 'Share', 'Map Reports', 'Identify', 'Draw', and 'Measure'. The main map area displays the Chesapeake Bay Watershed with various geographical features and data layers. A 'Map Layers' panel is open, showing a 'Custom' theme and a layer named 'Chesapeake Bay: Farms' which is checked. The map is annotated with numbered purple circles (1-8) and orange menu icons. At the bottom, there is a legend and a 'Basemap' dropdown menu. The footer text reads: 'Esri, HERE, Garmin, FAO, NOAA, USGS, EPA, NPS | 2017, Chesapeake'.

Sharing Conservation Stories

In addition to the core layer management feature, LandScape provides the ability to easily share stories and multimedia related to conservation planning:

The screenshot shows the LandScape Chesapeake map interface. The map displays the Chesapeake Bay Watershed with various layers and markers. The 'Add Layers' dialog box is open, showing a search for layers and a list of available layers. The 'Recreation' theme is selected in the 'Show layers from theme' dropdown. The map also shows a 'Map Layers' panel at the top, a 'BACK' button, and a 'Find Add' search bar. The map includes labels for cities like Cleveland, Akron, Youngstown, Pittsburgh, and Roanoke, and states like Ohio, West Virginia, and New York. The map also shows the Monongahela National Forest and the Chesapeake Bay. The 'Add Layers' dialog box lists the following layers:

- Appalachian National Scenic Trail
- Appalachian Trail Communities
- Appalachian Trail Maintaining Clubs
- Chesapeake Bay: Captain John Smith National Historic Trail
- Chesapeake Bay: Current and Potential Public Access Sites
- Chesapeake Bay: Potomac Heritage Trail

The map also shows a 'Legend' panel at the bottom left and a 'Basemap' panel at the bottom center. The map is titled 'Chesapeake Bay Watershed' and includes a 'Map Reports' button and a 'Measure' button. The map also shows a 'Save' button and a 'Share' button. The map is displayed on a mobile device, as indicated by the navigation icons on the left side of the screen.

Sharing Conservation Stories

In addition to the core layer management feature, LandScape provides the ability to easily share stories and multimedia related to conservation planning:

The screenshot shows the LandScape Chesapeake map interface. At the top, there is a navigation bar with a 'BACK' button. Below the navigation bar, there is a toolbar with options: Map Layers, Save, Share, Map Reports, Identify, Draw, and Measure. The map itself is titled 'Chesapeake Bay Watershed' and shows a satellite view of the region. Several purple circular markers with numbers (1-5) are placed on the map. A 'Map Layers' panel is open, showing a search for layers. The search results include 'Recreation' and 'waterfronts', with 'waterfronts' circled in green. Below the search results, there is a section for 'Add or Remove Layers' with a list of layers, including 'MD: Working Waterfronts' with a green plus sign. At the bottom of the map, there is a legend and a 'Basemap' dropdown menu. The footer of the map shows the text: 'Esri, HERE, Garmin, FAO, NOAA, USGS, EPA, NPS | 2017, Chesapeake'.

Conservation Priorities

Landscape Protection

We work with our partners to safeguard the picturesque vistas, wildlife habitat, farmlands and valuable historic sites that are all part of the Appalachian Trail experience

Protection of land along the Appalachian Trail (A.T.) has been a priority for Trail managers ever since the Trail was established, and we have worked with state and federal agencies since 1982 to protect the lands surrounding the A.T. This has resulted in one of the most significant and successful land acquisition programs in the United States, and today there is a 250,000 acre greenway around the Trail that connects significant public lands in the eastern United States.

Land protection for the treadway is almost complete, but we remain vigilant of development in the viewshed, especially at some of the most stunning overlooks on the Trail. We continue to work with federal, state and multiple private partners to acquire additional lands that complete the protection of the corridor, and safeguard the picturesque vistas, wildlife habitat, farmlands and valuable historic sites that are all part of the Trail experience.

Land protection is accomplished through active monitoring of the protected Trail corridor boundary, management of land held by the ATC's land trust, and supporting a network of volunteers who monitor proposals for incompatible development in the A.T. viewshed.

What is LandScope Chesapeake?

The Chesapeake Conservation Partnership

LandScope Chesapeake is the result of collaboration by the Chesapeake Conservation Partnership. The Chesapeake Conservation Partnership is:

- A regional coalition of over 50 diverse organizations.
- A collaboration of all six watershed states and DC including federal and state agencies, local governments, Native American tribes and non-profit organizations.
- Dedicated to the goals of the 2014 Chesapeake Bay Watershed Agreement.
 - Protecting an additional two million acres throughout the watershed by 2025.
 - Adding 300 new public access sites by 2025.

What is LandScope Chesapeake?

LandScope Chesapeake is a customized portal in LandScope America, with

What is LandScope Chesapeake?

The Chesapeake Conservation Partnership

- Adding 300 new public access sites by 2025.

What is LandScope Chesapeake?

LandScope Chesapeake is a customized portal in LandScope America, with emphasis on the Chesapeake Bay. LandScope Chesapeake is a tool for **guiding conservation planning**, and for **tracking conservation progress**.

Specifically, LandScope Chesapeake aims to:

- Provide localized, in-depth data relating to the Chesapeake Bay.
- Create a publicly accessible, watershed-wide land conservation priority system.
- Support collaboration among partners in land conservation efforts throughout the region

Guiding Conservation Planning

LandScope Conservation is meant to guide conservation planning by presenting in-depth data on priorities in the Chesapeake Bay watershed region.

What is LandScope Chesapeake?

The Chesapeake Conservation Partnership

throughout the region

Guiding Conservation Planning

LandScope Conservation is meant to guide conservation planning by presenting in-depth data on priorities in the Chesapeake Bay watershed region.

LandScope Chesapeake presents data on five in-depth **conservation priorities**:

- Forests
- Farms
- Habitat
- Heritage
- Human Health

LandScope Chesapeake provides a carefully curated collection of map data on each goal and the various federal, state, and local conservation priorities that contribute to them.

Conservation Goals

The Chesapeake Conservation Partnership has identified long-term landscape conservation goals for achieving a vision of a vibrant, healthy and sustainable Chesapeake region. These goals are intended to encompass the values that have already been documented through many public processes – from strategic and/or comprehensive plans to published studies and reports to formal designations by multiple levels of government. The goals are organized around five broad categories--Farms, Forests, Habitat, Heritage and Human Health--that encompass landscape level land protection concerns.

Our goals set out what is needed over the long term -- principally in terms of our relationship with the land and all it includes. They recognize all is interconnected -- a vibrant economy, strong communities, healthy people, working farms and forests, vital habitat for native wildlife, clean water, our shared heritage, recreation and quality of life. We treasure all these values, while we focus on select goals -- not as disconnected parts, but as parts of the whole, inextricably linked. In fact, in many places on the land multiple values overlap, bringing those with diverse interests together to work toward their conservation. These goals help drive our conservation work. We illustrate and map where these values exist. We collaborate in conserving these values, building the resources to do so. We track and celebrate progress.

To support collaboration toward these goals LandScope Chesapeake provides a carefully curated collection of map data on each goal and the various federal, state, and local conservation priorities that contribute to them.

The Chesapeake Conservation Partnership

<http://www.landscape.org/chesapeake/Priorities/Forests/>

Chesapeake Bay: Farms

Our Goal:

Protect the Chesapeake watershed's productive farms and prime farmland from conversion and secure space for urban farming to ensure sustainable sources of food for the region's population and to support the economic and cultural value of our working farms and farmers.

The Map:

Colors represent different high-priority farmland features.

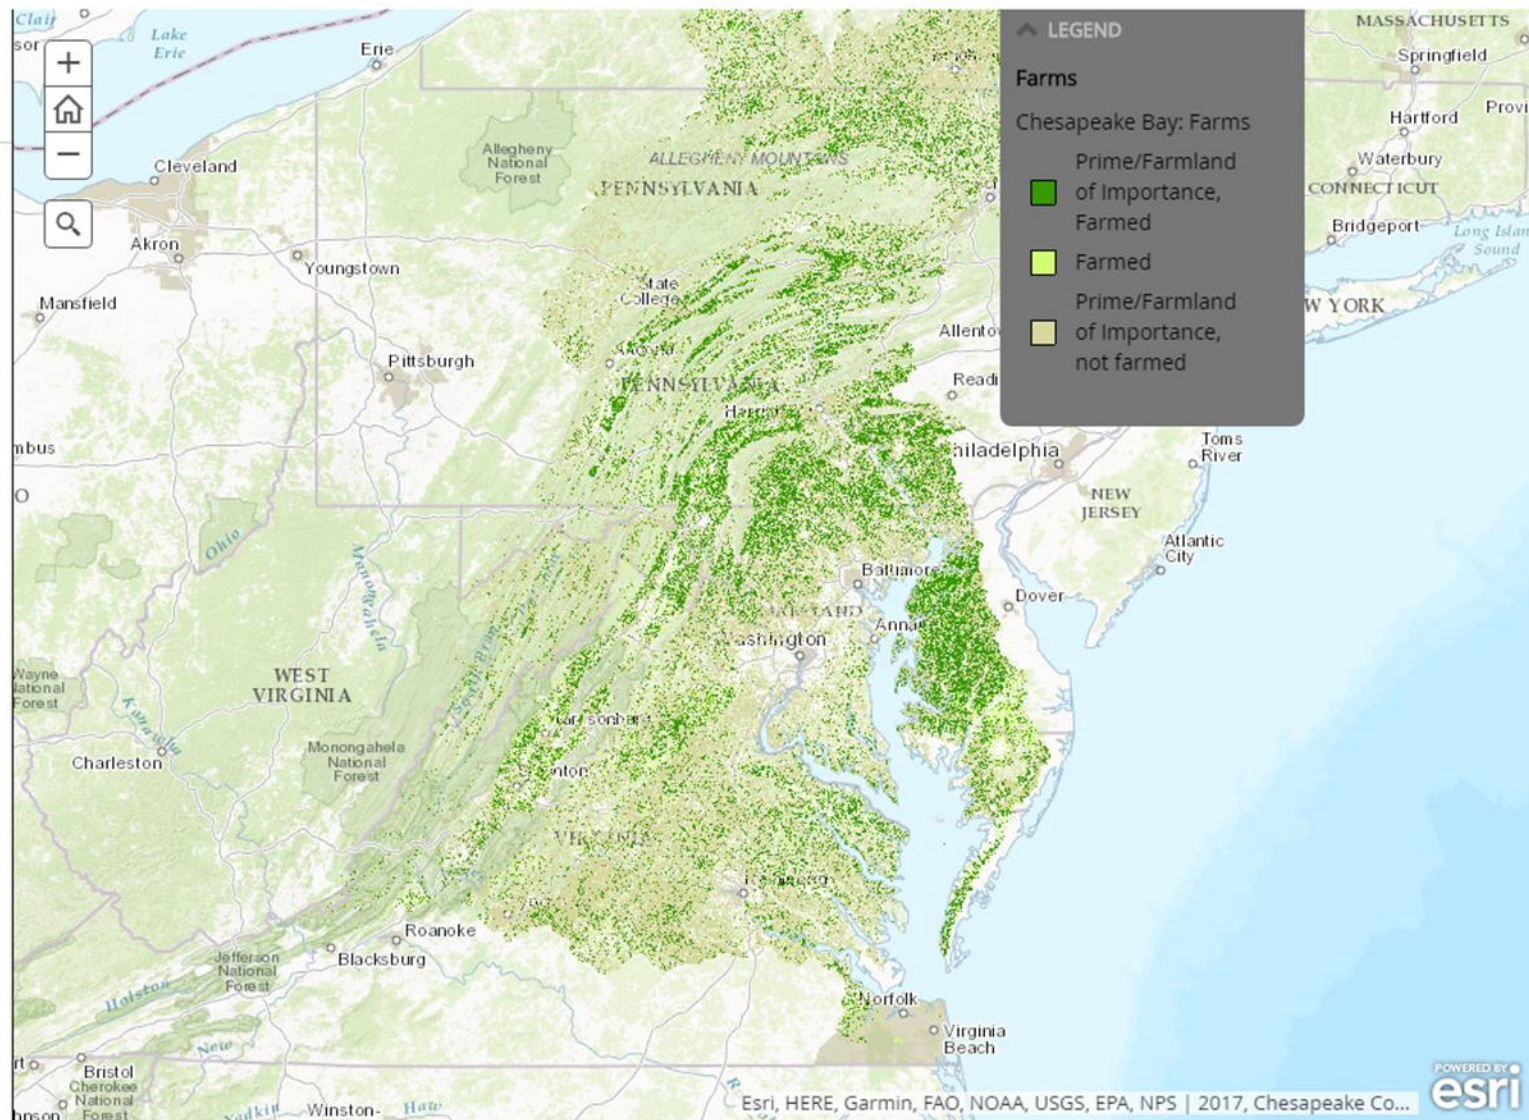

More Information:

More information is available at

<http://www.landscape.org/chesapeake/Priorities/Farms/>

Chesapeake Bay: Habitats

Our Goal:

Protect a network of large natural areas and corridors sufficient to allow nature to respond to a changing climate and land development and to support thriving populations of wildlife.

The Map:

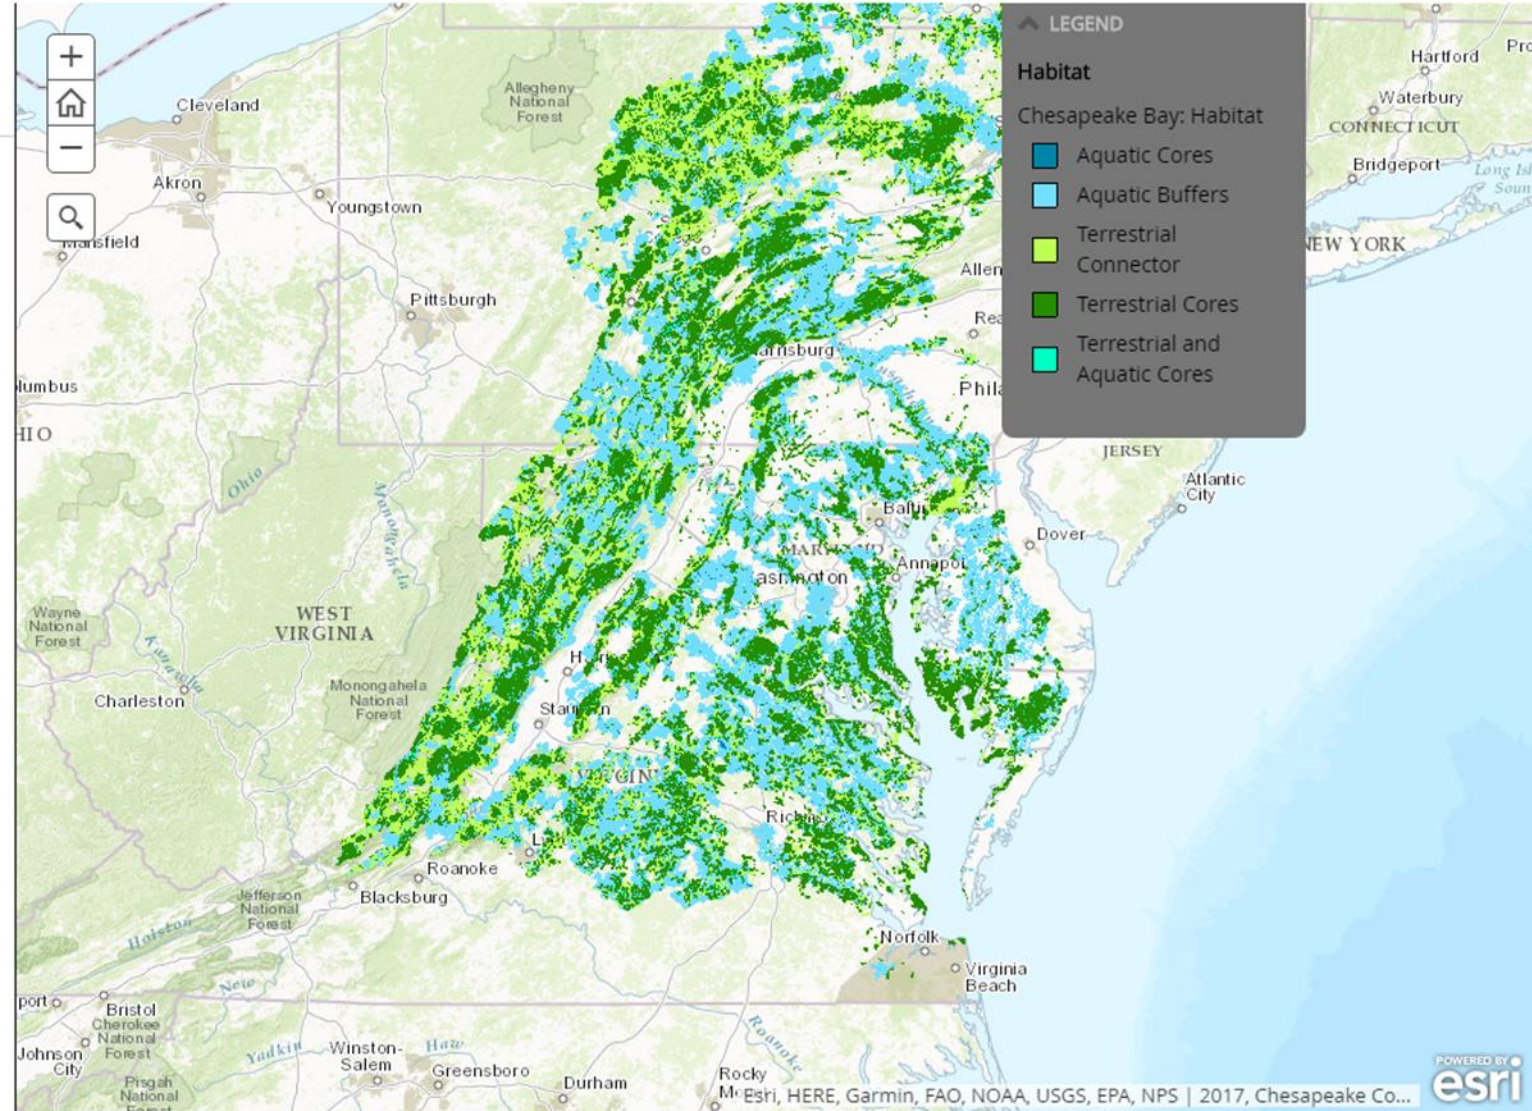

Colors represent aspects of natural corridors, both aquatic and terrestrial.

More Information:

More information is available at

<http://www.landscape.org/chesapeake/Priorities/Habitat/>

Chesapeake Bay: Heritage

What is LandScope Chesapeake?

The Chesapeake Conservation Partnership

<http://www.landscape.org/chesapeake/Priorities/Habitat/>

Chesapeake Bay: Heritage

Our Goal:

Protect the treasured landscapes of our collective heritage from development that would alter the scenery and character that conveys their importance -- along our designated trails and scenic rivers and byways, at our parks, and throughout our state and national heritage areas, valued cultural landscapes and historic districts.

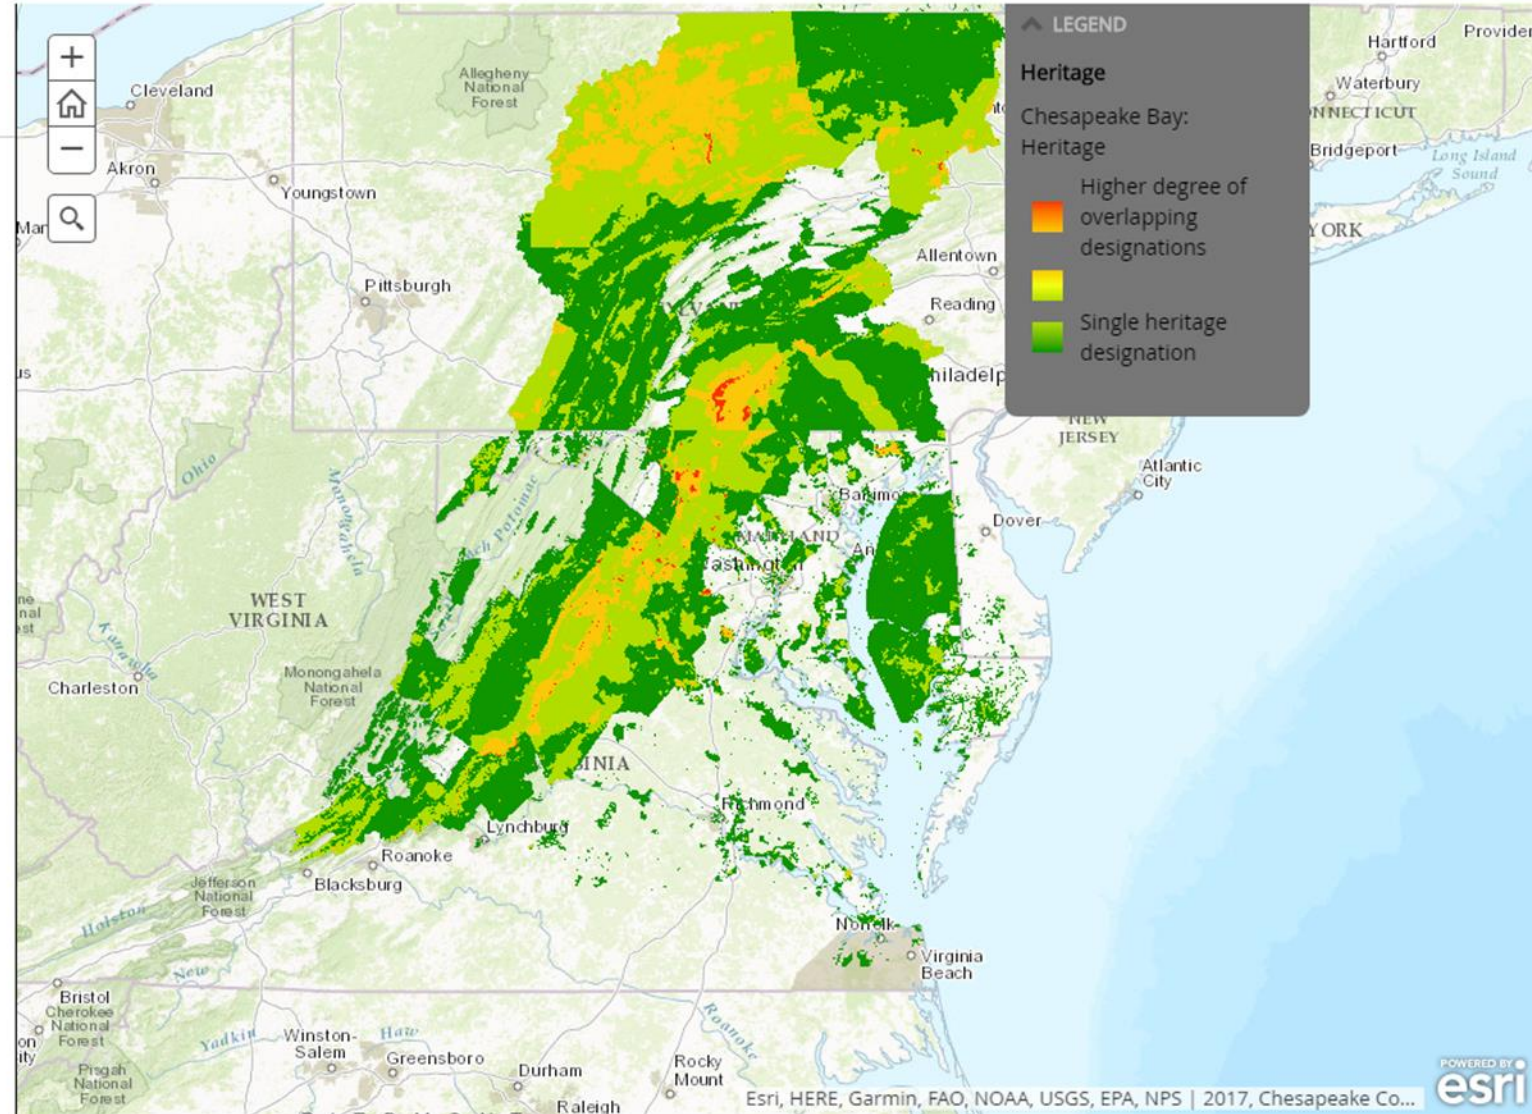

The Map:

Graduated colors represent areas of progressively greater overlap between heritage designations.

More Information:

More information is available at

<http://www.landscape.org/chesapeake/Priorities/Heritage/>

The Chesapeake Conservation Partnership

More information is available at

<http://www.landscape.org/chesapeake/Priorities/Heritage/>

Chesapeake Bay: Human Health

Our Goal:

Provide people access to parks and trail networks within walking and biking distance of their homes and communities. Provide sufficient opportunities along waterways to ensure nearly all residents are within 30 minutes of reaching a public access site at water's edge.

The Map:

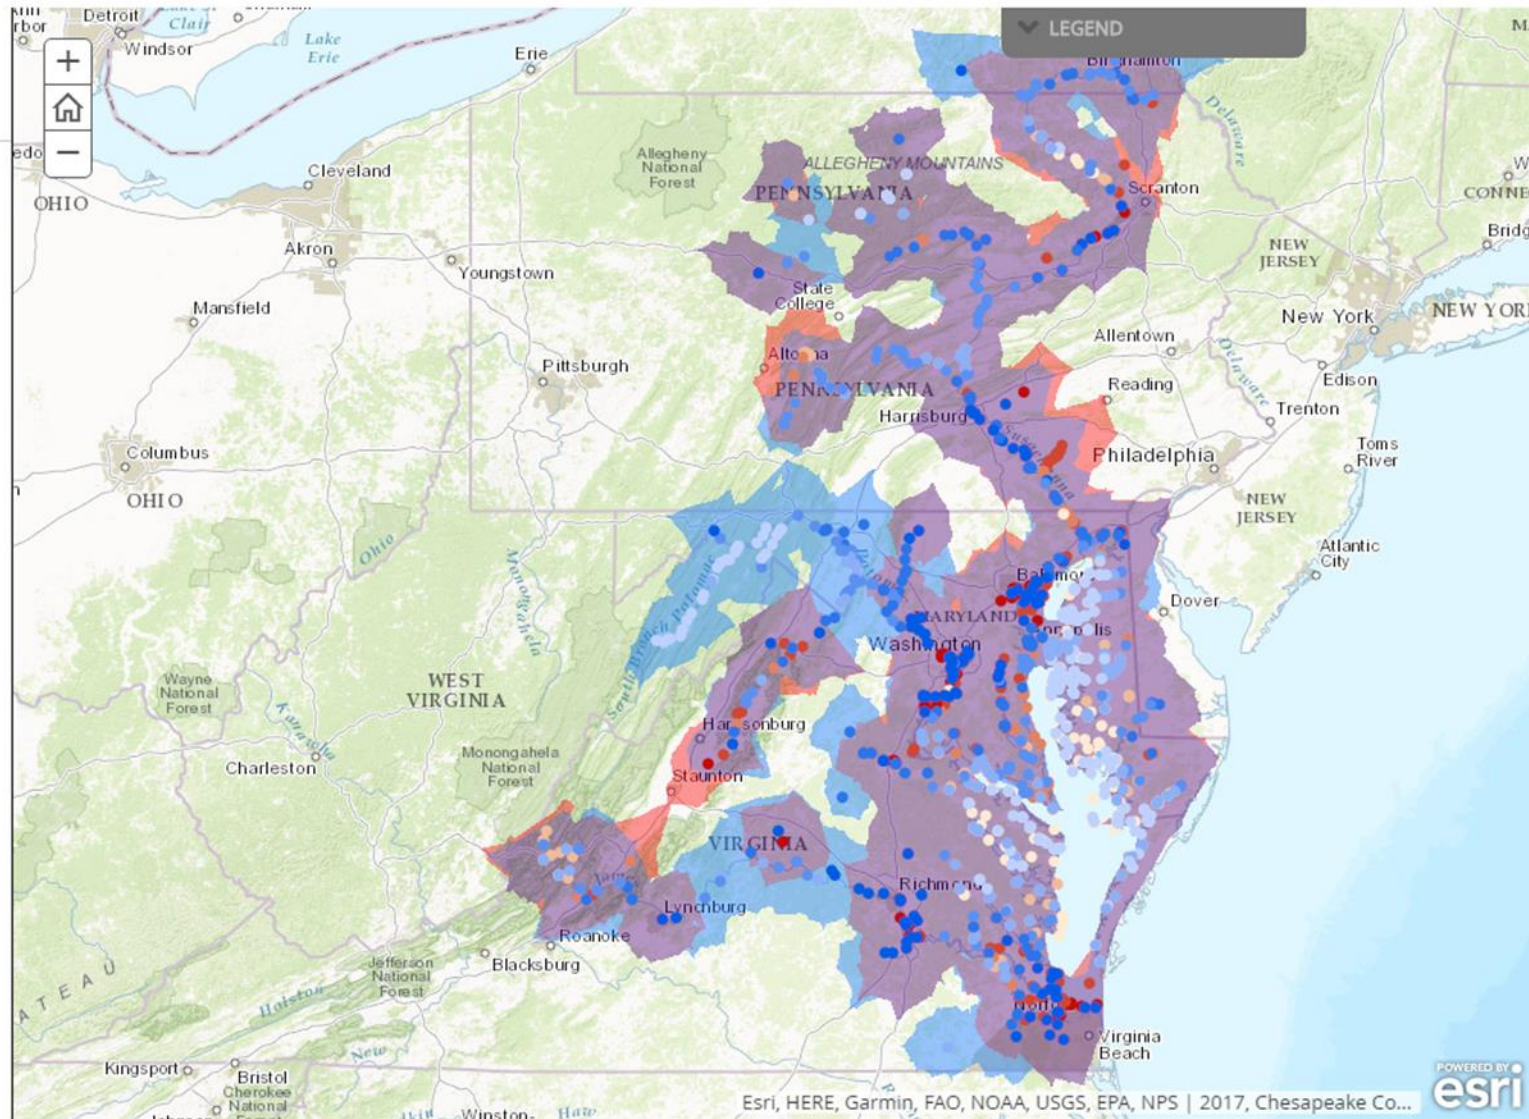

Colors represent areas adequate access to parks and water features.

Chesapeake Bay: Composite

What is LandScape Chesapeake?

The Chesapeake Conservation Partnership

More information is available at

<http://www.landscape.org/chesapeake/Priorities/Health/>

Chesapeake Bay: Composite

Our Goal:

Although still in development, the composite map will also allow users to view composites of conservation priorities, taking into consideration all priorities and identifying areas of high overlap and conservation importance.

The Map:

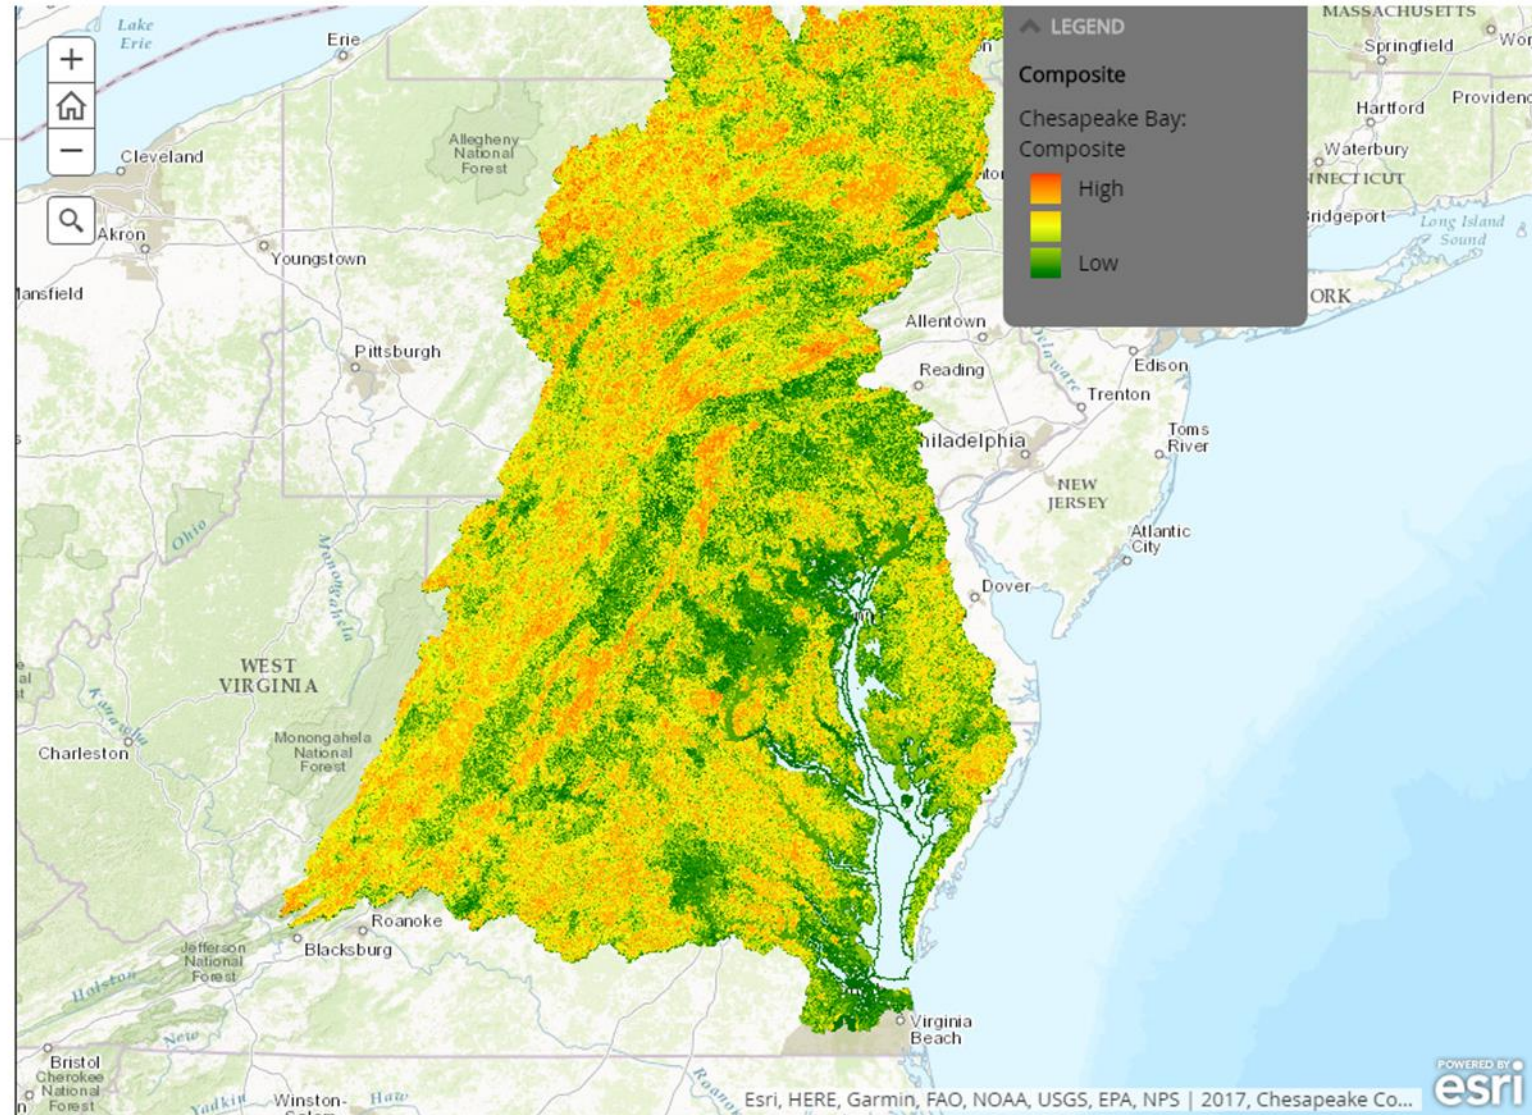

Colors represent areas of increasing overlap between all priority areas.

Tracking Conservation Progress

The second of LandScape Chesapeake's goals is to track conservation progress.

LandScape Chesapeake tracks conservation progress by:

- Tracking protected lands on a watershed-wide level.
- Tracking protected lands on a state-wide level.

What is LandScope Chesapeake?

The Chesapeake Conservation Partnership

Chesapeake Bay: Composite

Our Goal:

Although still in development, the composite map will also allow users to view composites of conservation priorities, taking into consideration all priorities and identifying areas of high overlap and conservation importance.

The Map:

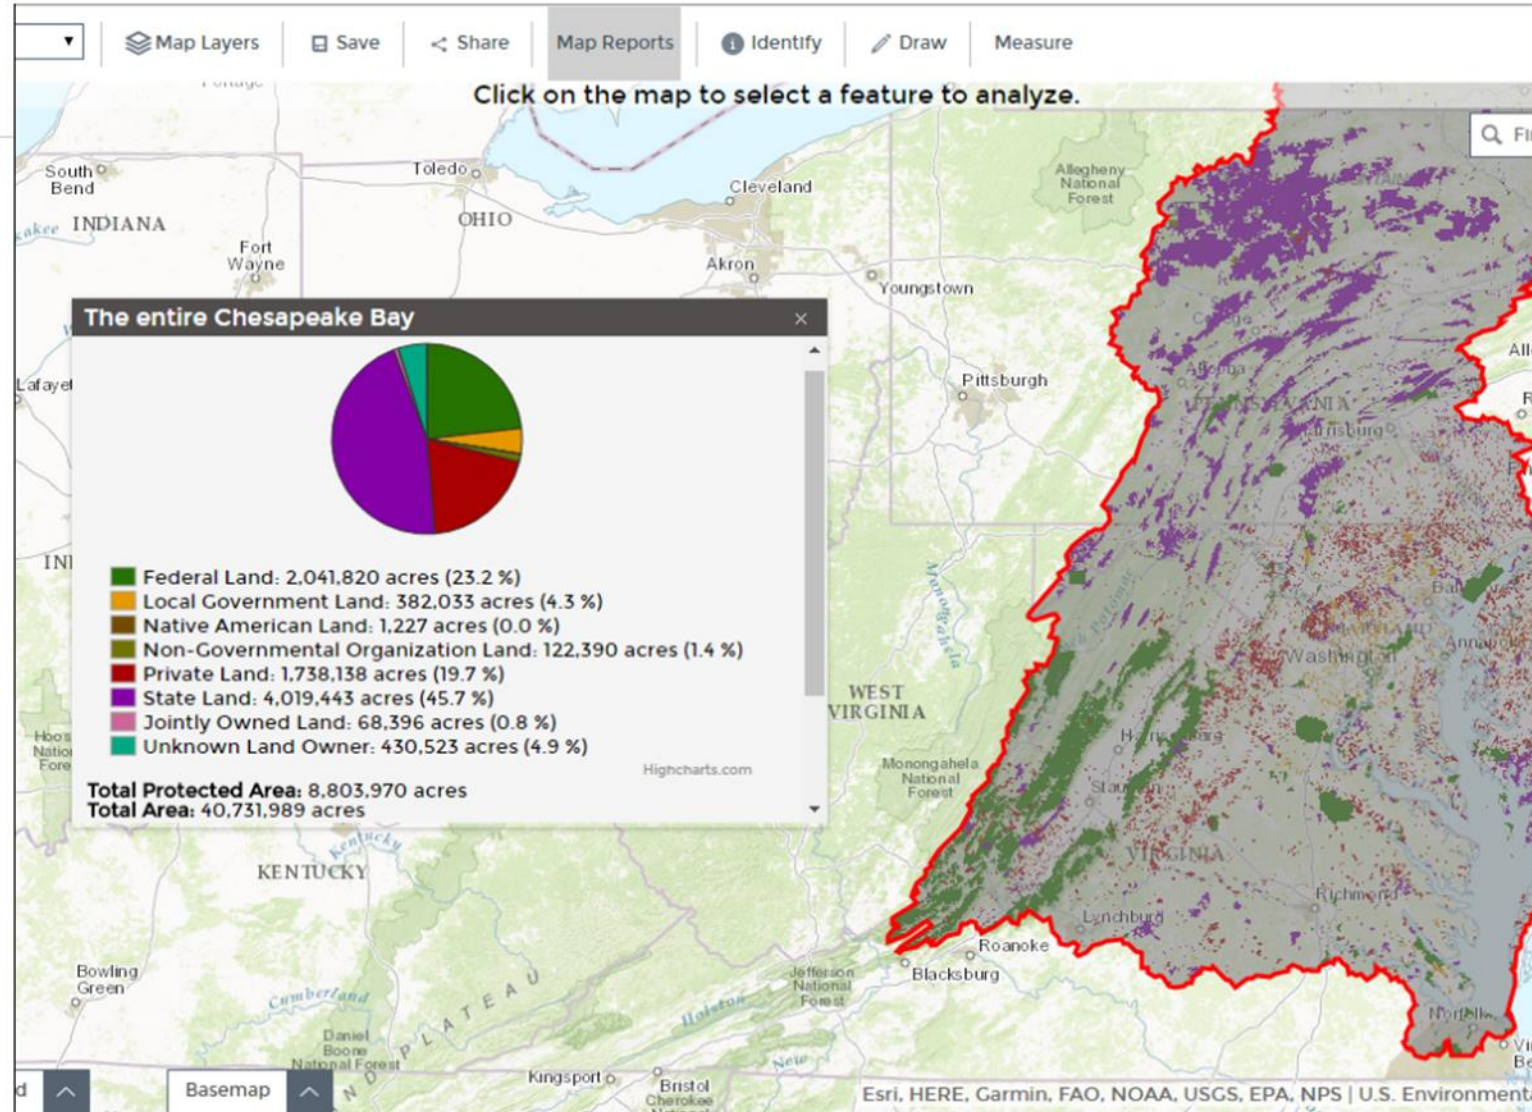

Colors represent areas of increasing overlap between all priority areas.

Tracking Conservation Progress

The second of LandScope Chesapeake's goals is to **track conservation progress**.

LandScope Chesapeake tracks conservation progress by:

- Tracking protected lands on a watershed-wide level.
- Tracking protected lands on a state-wide level.
- Tracking conservation progress by priority.
- Presenting areas around the Chesapeake that have benefited from coordinated conservation efforts.

What is LandScope Chesapeake?

Chesapeake Bay States

Protected Lands

With the signing of the [Chesapeake Bay Watershed Agreement in 2014](#), Chesapeake conservation partners are committed to "protect an additional two million acres of lands throughout the watershed—currently identified as high-conservation priorities at the federal, state or local level—including 225,000 acres of wetlands and 695,000 acres of forest land of highest value for maintaining water quality" by 2025, building on a 2010 baseline of 7.8 million acres. This carries forward the same goal as set out through the Chesapeake Bay Executive Order.

© Chesapeake Bay Program

Tracking carried out since 2010 shows that as of 2016 a watershed-wide total of over 8.8 million acres are currently protected, representing 22% of the land area in the watershed. This marks an achievement of 50 percent of the goal to protect an additional two million acres of land throughout the watershed since 2010. Note, however, that improvements in reporting have produced a more comprehensive and accurate account of land protection in the watershed. A portion of the 1,004,577 acres recorded from 2010 through 2016 was likely protected before 2010, but the extent of this is not feasible to document.

Protected Lands in the Chesapeake

© Chesapeake Bay Program

Chesapeake: Protected Lands

This dataset is an aggregated layer of protected lands in the Chesapeake Bay Watershed and intersecting counties. It is a combination of multiple state, federal and non-governmental organization sources. Overlapping and duplicate areas have been deleted to address double counting of acres. It is current as of mid 2016.

Lower Susquehanna

Pennsylvania's Lower Susquehanna River is a crossroads of history, wildlife habitat, and recreational beauty comprising more than 2,000 acres of publicly accessible protected areas. Framed by the forested rocky cliffs and rolling hills of York and Lancaster counties, the Lower Susquehanna runs through a rural landscape dotted with small shoreline towns.

© Chesapeake Bay Program

The Susquehanna River provides half the freshwater flowing into the Chesapeake Bay, and Native Americans have occupied its lower reaches for over 12,000 years. Early explorers noted stockaded settlements as early as 1550, well before John Smith's epic journeys of the Bay's upper reaches. Today, the corridor contains American Indian sites and petroglyphs, water and land trails, state parks, two state heritage areas, wildlife habitat, the Captain John Smith Chesapeake National Historic Trail, four National Recreation Trails and a National Natural Landmark.

The corridor is also the focus of an innovative conservation partnership coordinated by the Pennsylvania Department of Conservation and Recreation (DCNR). Designation of the Lower Susquehanna Conservation Landscape Initiative—one of Pennsylvania's seven CLIs—seeks to enhance this rich landscape through preservation of the forested river landscape (especially environmentally sensitive areas), better stewardship of natural and cultural resources, improved public access to the river, and sustainable economic revitalization strategies keyed to heritage and ecotourism in communities like Marietta, Columbia, and Wightsville.

DCNR and other partners, including the Lancaster and York County Planning Commissions, the Lancaster County Conservancy, The Conservation Fund, and the Susquehanna Gateway Heritage Area, are also working to implement protection strategies with the regional utilities that own many lands in the corridor.

Conservation Planning Targets

Climate change can affect both crop yield and the land area suitable for agriculture (Zhang, 2011).

Given the urgency of preserving these farmlands, strategic conservation planning is necessary to adjust broad strategic goals.

Using LandScape, add the US Forest Service Climate Change Stress Index to the map in order to account for time-sensitive demands and adjust goals.

LandScope Chesapeake Use Cases

I work for a land trust in Frederick County and I would like to find out if there are any high value forests that overlap my service area and my easements.
Can LandScope help me do that? Are any of those forests important for water quality?
