

2020 MWMC Above and Beyond Award – Andrew Sarcinello

Andrew Sarcinello has led the creation of Trout Unlimited's citizen science initiative in Maryland. The pilot stream temperature monitoring program currently underway, is a collaboration with the US Geological Survey, MD-DNR and MDE, measuring stream temperatures in the Catoctin Mountain area. That data will ultimately be used to identify areas of thermal impact for future remediation as well as for modeling the impacts of climate change on stream temperatures in these heritage brook trout waters.
